. Beskrivning av kursupplägget.

Beskrivning av kursupplägget.

The course Ordinary differential equations consists of lectures and exercises, as well as a project with presentation. For passing the course it is necessary to pass the project and a written exam. For a higher mark a non-obligatory oral can be done.

. Kursens fördelar, beakta studenternas uppfattning i kursutvärderingar.

Kursens fördelar, beakta studenternas uppfattning i kursutvärderingar.

For the project the students can choose between a numerics project and a theory project, which was appreciated.

In order to collect bonus points for the written exam one could hand in solutions, one problem per week. This was different to other courses, where there are more problems, but fewer submissions (= approx. same number of problems). The advantage is more continuous work with the material.

. Kursens nackdelar, beakta studenternas uppfattning i kursutvärderingar.

Kursens nackdelar, beakta studenternas uppfattning i kursutvärderingar.

The course book could be more appreciated. Unfortunately it was hard to find this one.

. Slutsatser samt förslag till förbättringar.

Slutsatser samt förslag till förbättringar.

One might think of writing own lecture notes, that fit the course material.
