. Beskrivning av kursupplägget.

Beskrivning av kursupplägget.

This is a basic mathematics course for economist. We start a review with high school mathematics. Then we go into 1-variable optimization, Taylor polynomials, integrals, linear algebra and two variable optimization.

. Kursens fördelar, beakta studenternas uppfattning i kursutvärderingar.

Kursens fördelar, beakta studenternas uppfattning i kursutvärderingar.

Not enough students reply to the review to be significant. The general ideal is that the material proposed is useful for their choice of career and the exam is fair.

. Kursens nackdelar, beakta studenternas uppfattning i kursutvärderingar.

Kursens nackdelar, beakta studenternas uppfattning i kursutvärderingar.

Too much material, in too few time when the students have not studied math in at least (in the very best case scenario) in the last two years. Some of the students struggle with basic operations, it is unrealistic that they will be able to perform 2-variable optimization in less than 4 months.

. Slutsatser samt förslag till förbättringar.

Slutsatser samt förslag till förbättringar.

We should maybe review the program, reduce the material and focus on what the student will need in future courses. It will be nice to have an online math-refresher course that make the students ready for this course.
